## Differentiation \& Functions (Q 6, 7 \& 8, Paper 1)

## 2011

6. (a) $f: x \rightarrow f(x)$ is a periodic function defined for $x \in \mathbb{R}$.

The period is as indicated in the diagram.

(i) Write down the period and the range of the function.
(ii) Find $f(71)$.
(b) (i) Differentiate $(4 x-1)\left(3-2 x^{2}\right)$ with respect to $x$ and simplify your answer.
(ii) Given that $y=\frac{1}{x^{2}-3 x}, x \neq 3$, find the range of values of $x$ for which $\frac{d y}{d x}<0$.
(c) Let $f(x)=2 x+\frac{1}{x}$, where $x \in \mathbb{R}$ and $x \neq 0$.
(i) Find the equation of the tangent to the curve $y=f(x)$ at the point $P(1,3)$.
(ii) $Q$ is another point on the curve $y=f(x)$ such that the tangent at $Q$ is parallel to the tangent at $P$. Find the co-ordinates of $Q$.

(ii) How far is the ball from the starting point when it stops moving?
(iii) Show that the speed of the ball decreases at a constant rate while it is moving.
