## Tifgonometry (Q 5, Paper 2)

## Lesson No. 3: Sector of a Circle

## 2005

5 (a) A circle has centre $o$ and radius 14 cm . $p$ and $q$ are two points on the circle and $|\angle q o p|=135^{\circ}$.
Find the length of the shorter arc $p q$.
Take $\pi=\frac{22}{7}$.

## 2004

5 (b) A circle has centre $o$ and radius 4 cm .
$a$ and $b$ are two points on the circle and
$|\angle a o b|=150^{\circ}$.
(i) Find the area of the circle, correct to the nearest $\mathrm{cm}^{2}$.
(ii) Find the area of the sector $a o b$, correct to the nearest $\mathrm{cm}^{2}$.

(iii) Find the length of the shorter arc $a b$, correct to the nearest cm .

2003
5 (b) A circle has centre $o$ and radius 7 cm . The two points $b$ and $c$ are on the
circle and $|\angle b o c|=140^{\circ}$.
(i) Find the area of the triangle $o b c$, correct to the nearest $\mathrm{cm}^{2}$.
(ii) Find the area of the sector obc, correct to the nearest $\mathrm{cm}^{2}$.
(iii) Taking the areas correct to the nearest $\mathrm{cm}^{2}$, express the area of the shaded region as a fraction of the total area enclosed by the circle. Give your answer as a fraction in its simplest form.

## 2002

5 (b) A circle has radius 24 cm and centre $o$.
(i) Calculate the area of a sector which has $70^{\circ}$ at $o$. Take $\pi=\frac{22}{7}$.

(ii) An arc of length 48 cm subtends an angle $A$ at $o$. Calculate $A$, correct to the nearest degree.

## 1999

5 (b) In the diagram, $o$ is the centre of the circle with radius length 5 and $p$ and $q$ are points on the circle. $|\angle p o q|=80^{\circ}$.
Find, correct to two places of decimals,
(i) the area of triangle poq
(ii) the area of the shaded region, taking $\pi=3 \cdot 14$.

## 1998

5 (a) The angle at the centre of a sector of a disc measures $140^{\circ}$.
The radius of the disc measures 6 cm .
Find, in terms of $\pi$, the area of the sector.

## 1996

5 (a) Find the length of an arc of a circle of radius length 6 cm subtending an angle of $120^{\circ}$ at the centre. Give your answer in terms of $\pi$.
